

YASH ANAND

Data Science | Machine Learning | Python / Java | AI Integrations
Phone: 8076839293 | yashanand2755@gmail.com | Delhi, India | github.com/yashanand969-max

SUMMARY

Second-year Computer Science (Data Science) student and Smart India Hackathon participant with hands-on experience delivering AI-driven solutions, developing business applications, and leading technical projects. Demonstrated ability to own a product cycle from conceptualization to execution, including deploying an automated invoice generator as a freelance developer for a live engineering firm and architecting an AI-based traffic control system. Seeking an internship to contribute to production-ready code and drive impactful results.

TECHNICAL SKILLS

Languages & Databases: Python, Java, SQL, HTML/CSS, JavaScript, MySQL

ML & Data Science: Scikit-Learn, Pandas, NumPy, Data Mining, Predictive Modeling

AI & Infrastructure: Prompt Engineering, Google Veo, Git, GitHub, FastAPI, Docker, Streamlit

Core Competencies: Data Structures & Algorithms (DSA), OOP, Database Administration

EXPERIENCE

Freelance Developer | Client: I4U Engineering Services

Delhi (Remote)

- Developed and deployed a fully functional, automated invoice generator web application that converts raw Excel data into formatted HTML invoices.
- Streamlined the client's monthly billing workflow, eliminating manual data entry errors and significantly reducing their administrative processing time.
- Designed and produced digital marketing materials, including reels for the "Transforming Spaces" campaign, to effectively communicate business offerings and architectural concepts.

PROJECTS

Automated Invoice Generator Application

Python | HTML | Excel Parsing

Live Project: i4uinvoice.netlify.app

- Engineered a web-based application utilizing an automated data pipeline to parse raw client data from Excel files and programmatically render professional HTML invoices.
- Deployed as an independent solution to streamline business operations and reduce manual calculation errors for I4U Engineering Services.

AI-Managed Traffic Control System

Machine Learning | Python

Smart India Hackathon

- Designed a machine learning-driven traffic management solution to analyze real-time vehicle density and dynamically optimize traffic signal timings.
- Proposed a data processing architecture capable of ingesting live camera feeds to reduce peak-hour congestion and prioritize emergency vehicle routing.

EDUCATION

Bachelor of Technology in Data Science

2024 - 2028 (Expected)

Manipal University Jaipur

- Core modules:** Data Structures & Algorithms (DSA), Object-Oriented Programming (Java), Machine Learning, Data Mining, Database Management Systems (DBMS), Computer System Architecture (CSA).

LEADERSHIP, ACHIEVEMENTS & CERTIFICATIONS

- Vice President | MUJ Origins (2026-2027):** Lead the strategic direction and daily operations of the club, fostering community engagement and overseeing large-scale technical and cultural initiatives.
- Head of Events | Unstop Igniters (2025-2026):** Directed the planning and execution of comprehensive technical events, notably organizing and managing a large-scale campus relay event involving over 600 students.
- Core Committee Member | Aperture & Oneiros 2026 Festival Committee:** Manage production, digital media, and inter-departmental coordination for major university festivals.
- Smart India Hackathon Participant:** Showcased technical problem-solving and AI development under competitive pressure by designing a machine learning-based traffic control system.
- Workshop Certification | Prompt Engineering:** Completed an intensive workshop focused on advanced prompt crafting, designing context-aware system instructions, and implementing generative AI workflows.
